

PET 2006, Hanoi, Vietnam, July 30 - August 6 2006

A report on the CTN session

by Guillaume Haeringer, Universitat Autònoma de Barcelona

For the second time the CTN is organizing a session during the Public Economic Theory Conference. This year the Public Economic Theory Conference was held in Hanoi, Vietnam. Each year the organizing committee of the CTN workshop receives good papers that cannot be included in the program of the workshop. Thanks to Myrna Wooders, it has been proposed to the authors of the rejected papers to present their work at the PET conference, and also to include the CTN session in the call for papers of the PET conference. I would like to thank Silvia Bertolin, Myrna Wooders, Francis Bloch and Sergio Currarini who worked with me for the organization of the session. The papers that were presented at the CTN session were "Ultimatum: Evolution of Heterogeneous Preferences for Fairness," by Wei-Torng Juang; How to mitigate the free riding problems: The proportional allocations for transboundary resource management," by Kim Hang Pham Do; and "Multiple Stochastically Stable Equilibria in Collective Decision Making," by Toshimasa Maruta.
